

# Purrfect Pet

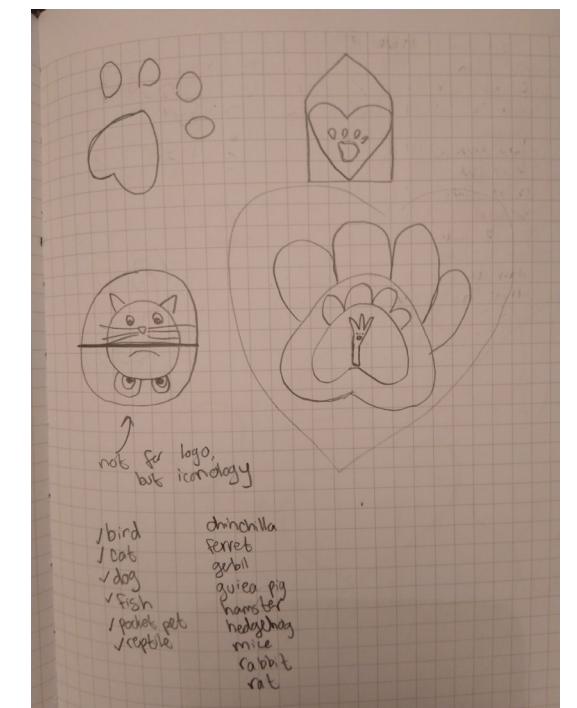

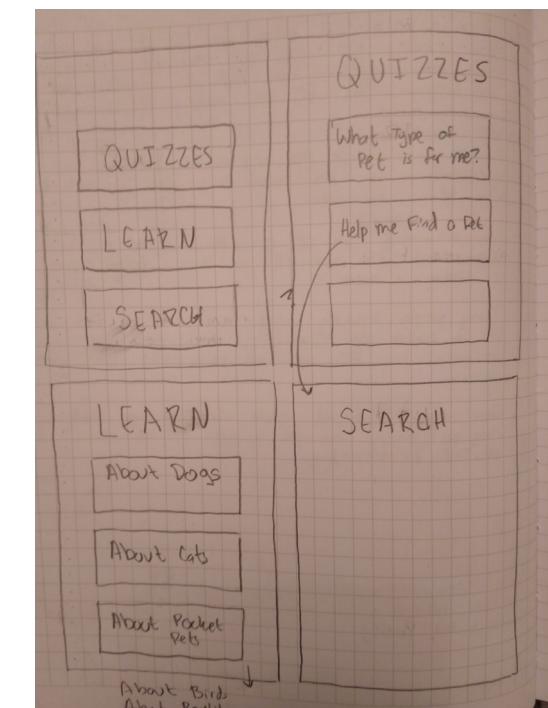

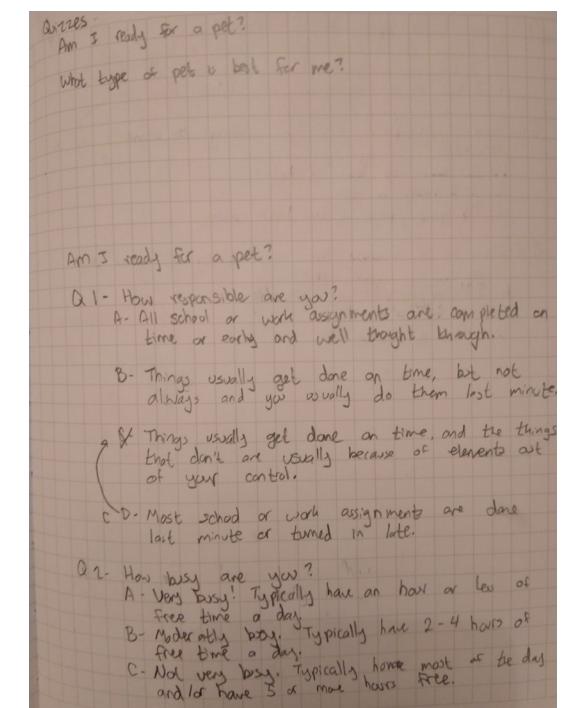

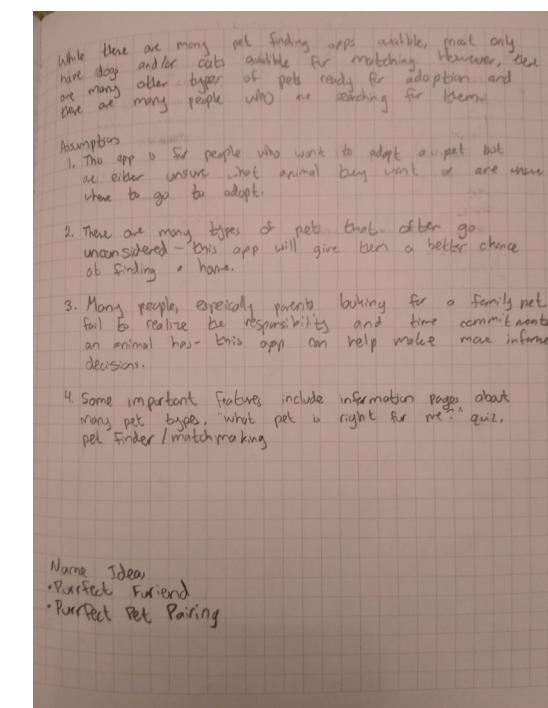

-Learn about and Find your new best friend-

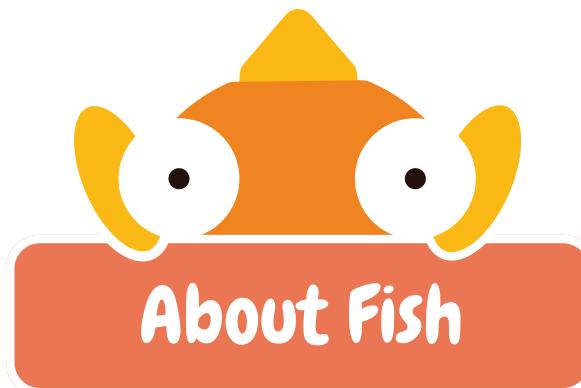

Purrfect Pet is an app with information about all types of pets in one convenient location including habitat, typical personality, diet, and how much time you'll have to dedicate to caring for your pet each day. This app also connects you to the websites of your local shelters and pet stores. In addition, I have started conventionalizing an AR aspect that adds interactions with various types of animals in order to help judge what life would be like owning a specific type of pet.

## Sketches

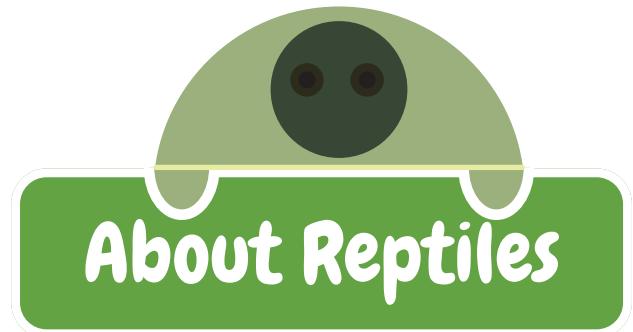

I started in my sketch book. I sketched a few wire frames and icon/logo ideas. I also listed what I wanted to include in the app to help me figure out what's important and what's not. I also wrote the questions for my first quiz idea.

## Illustrator

After I was done with sketching and planning, I moved to Illustrator. In Illustrator, I created icons for the app. Due to time constraints, I only was able to make icons for the animals in the About section. In the future, I would like to go back and add more icons for a higher fidelity prototype.

# Prototype in Figma

I used Figma to make a mid-fidelity prototype. The completed pages are fully connected and can be clicked through, however, it lacks motion or visual feedback. So far it only has one path through the app--one quiz, one animal in the learn section, and one animal in the search section. Upon further reflection, I believe "Search" should be changed to "Adopt" to indicate that it takes you to shelter pages to find a pet to adopt rather than a function to search within the app.
